20 2 Review And Reinforcement

A token is an object or symbol that is exchanged for goods or services. Tokens, in the form of clay coins, first appeared in human history in the transition from nomadic hunter-gatherer societies to agricultural societies, and the expansion from simple barter economies to more complex economies (Schmandt-Besserat, 1992). Since that time, token systems, in one form or another, have provided the ...

In behavioral psychology, reinforcement is a consequence applied that will strengthen an organism's future behavior whenever that behavior is preceded by a specific antecedent stimulus. This strengthening effect may be measured as a higher frequency of behavior (e.g., pulling a lever more frequently), longer duration (e.g., pulling a lever for longer periods of time), greater magnitude (e.g. ...

Therefore, it is important that reinforcement is scheduled, be it positive or negative. To plan reinforcement two important dimensions have to be considered, viz., Time, and Responses. 1. Fixed-ratio schedules: Reinforcing a behavior after a specific number of responses have occurred. Example: If the employee sells 10 passes he gets a bonus. 2.
