line graphs there may be times when other types would be appropriate but they are rare"7 making graphs and interpreting data mr fisher s website

Making Science Graphs And Interpreting Data Answers

Answer: (a) OA is a straight line graph between speed and time, and it is sloping upward from O to A. Therefore, the graph line OA represents uniform acceleration. (b) AB is a straight line graph between speed and time, which is parallel to the time axis (x-axis). So, AB represents uniform speed. There is no acceleration from A to B.

Science A-Z Science Diagrams - Visual Teaching Tools

Simply put, independent variables are inputs and dependent variables are outputs. For example, a graph showing the amount of time spent studying on a test vs. the average score gives clear examples of each. The independent variable, the time spent studying on a test, is the amount that we can vary. The dependent variable, or the test score, is based on the value of the independent variable.
