Lactose intolerance in infants (congenital lactase deficiency) is caused by mutations in the LCT gene. The LCT gene provides instructions for making the lactase enzyme. Mutations that cause congenital lactase deficiency are believed to interfere with the function of lactase, causing affected infants to have a severely impaired ability to digest lactose in breast milk or formula.

The Bald Eagle has been the national emblem of the United States since 1782 and a spiritual symbol for native people for far longer than that. These regal birds aren't really bald, but their white-feathered heads gleam in contrast to their chocolate-brown body and wings. Look for them soaring in solitude, chasing other birds for their food, or gathering by the hundreds in winter.

Though we are born without them, bacteria inhabit our body within seconds of our birth. They live in our mouths, around our eyes, in our digestive systems, under our arms and in the shoots of our hair. Most are helpful or at least harmless. The three or so pounds of bacteria living in our gut—mostly in the large intestine—help us digest all manner of food.
