A multibody dynamic (MBD) system is one that consists of solid bodies, or links, that are connected to each other by joints that restrict their relative motion. The study of MBD is the analysis of how mechanism systems move under the influence of forces, also known as forward dynamics.

Multibody Dynamics - MSC Software

The use of multibody tools in a virtual environment, aiming to real-time, leads to models where a compromise between accuracy and computational efficiency has to be reached. Complex multibody models that undergo complex interactions often experience some level of deformations while contact between the system components or with external surfaces occurs.
