A unit circle has a radius ( $r$ ) of 1, which gives it a circumference of  $2\pi$ , since circumference =  $2\pi r$ . The unit circle allows you to easily see the relationship between cosine and sine coordinates of angles, as well as the measurement of the angles in radians. Knowing the unit circle will help you more easily understand trigonometry, geometry, and calculus. At first, the unit circle may ...

In mathematics, graph theory is the study of graphs, which are mathematical structures used to model pairwise relations between objects. A graph in this context is made up of vertices (also called nodes or points) which are connected by edges (also called links or lines). A distinction is made between undirected graphs, where edges link two vertices symmetrically, and directed graphs, where ...

Start with the horizontal scale. If you are using graph paper, let 1 unit on the graph paper equal 1 unit of the values you are graphing. Determine whether the greatest value will fit on the graph. If it doesn't, then change the scale and try again. Now repeat this process for the vertical scale.

You can change the circle radius (which changes the amplitude of the sine curve) using the slider. The scale along the horizontal t-axis (and around the circle) is radians. Remember that  $\pi$  radians is  $180^\circ$ , so in the graph, the value of  $\pi = 3.14$  on the t-axis represents  $180^\circ$  and  $2\pi = 6.28$  is equivalent to  $360^\circ$ .

The Petersen graph can also be drawn (with crossings) in the plane in such a way that all the edges have equal length. That is, it is a unit distance graph.. The simplest non-orientable surface on which the Petersen graph can be embedded without crossings is the projective plane. This is the embedding given by the hemidodecahedron construction of the Petersen graph (shown in the figure).

Make a horizontal line on the paper. You may draw arrows on the ends of the line to indicate it is a number line that continues past your data sample. Put the label "X" to the right of the line to indicate the x axis. Mark the center of the line with a vertical tick mark and label it 0. This is the origin of the graph.
