Human Body System Review Packet

Cells in the human body are of different types based on their structure and function.. Scientifically, a Cell is the basic unit of life. A group of cells from a tissue and a group of tissues form an organ.. A group of organs makes up an organ system, and a group of organ systems makes up the human body.. So, if an organ is damaged, the cells and cell structure in the organ are also damaged.

The current U.S. system of protection for human research subjects is heavily influenced by the Belmont Report, written in 1979 by the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research. The Belmont Report outlines the basic ethical principles in research involving human subjects.

Federal Policy for the Protection of Human Subjects ...

A sense is a biological system used by an organism for sensation, the process of gathering information about the world and responding to stimuli. (For example, in the human body, the brain receives signals from the senses, which continuously receive information from the environment, interprets these signals, and causes the body to respond, either chemically or physically.)
