Introduction To Functional Programming Systems

Functional Programming - Introduction, Functional programming languages are specially designed to handle symbolic computation and list processing applications. Functional programming is based on math ... Embedded Lisp interpreters add programmability to some systems like Emacs. Functional Programming vs. Object-oriented Programming.

Functional Programming - Introduction

In computer science, functional programming is a programming paradigm where programs are constructed by applying and composing functions. It is a declarative programming paradigm in which function definitions are trees of expressions that map values to other values, rather than a sequence of imperative statements which update the running state of the program. ...

Functional programming - Wikipedia

Functional reactive programming (FRP) is a programming paradigm for reactive programming (asynchronous dataflow programming) using the building blocks of functional programming (e.g. map, reduce, filter). FRP has been used for programming graphical user interfaces (GUIs), robotics, games, and music, aiming to simplify these problems by explicitly modeling time.

The Future. During the past 20+ years, the trends indicated by ever faster networks, distributed systems, and multi-processor computer architectures (even at the desktop level) clearly show that parallelism is the future of computing.; In this same time period, there has been a greater than 500,000x increase in supercomputer performance, with no end currently in sight.

It is a gentle approach to programming for students who intend to make a career in some other field. Contrary to the author's claim on the cover, it is NOT an introduction to the field of Computer Science. There is much, much more to the science of computing than simply learning a programming language.

It stands for Object Oriented Programming. Object-Oriented Programming (OOP) uses a different set of programming languages than old procedural programming languages (C, Pascal, etc.). Everything in OOP is grouped as self-sustainable "objects". Hence, you gain reusability by means of four main object-oriented programming concepts.
