Chromosome 8 is one of the 23 pairs of chromosomes in humans. People normally have two copies of this chromosome. Chromosome 8 spans about 145 million base pairs (the building material of DNA) and represents between 4.5 and 5.0% of the total DNA in cells.. About 8% of its genes are involved in brain development and function, and about 16% are involved in cancer.

Chromosome 11 is one of the 23 pairs of chromosomes in humans. Humans normally have two copies of this chromosome. Chromosome 11 spans about 135 million base pairs (the building material of DNA) and represents between 4 and 4.5 percent of the total DNA in cells. The shorter arm (p arm) is termed 11p while the longer arm (q arm) is 11q. At about 21.5 genes per megabase, chromosome 11 is one of the ...

Chromosomenaberrationen beim Menschen werden in der klinischen Zytogenetik mit der ISCN-Nomenklatur beschrieben (International System for Human Cytogenetic Nomenclature). Kleinere, in zytogenetischen Präparaten lichtmikroskopisch nicht sichtbare Veränderungen wie beispielsweise Mutationen an einzelnen Genen (Genmutationen) werden dagegen ...

The myelodysplastic syndromes (MDS) consist of a heterogeneous spectrum of myeloid clonal hemopathies. The International Prognostic Scoring System (IPSS) has been an important standard for assessing prognosis of primary untreated adult MDS patients. 1 However, since its publication in 1997, modification of existing parameters and additional prognostic systems have been suggested as providing ...
