Insect collecting refers to the collection of insects and other arthropods for scientific study or as a hobby. Most insects are small and the majority cannot be identified without the examination of minute morphological characters, so entomologists often make and maintain insect collections. Very large collections are conserved in natural history museums or universities where they are ...

### Insect collecting - Wikipedia

Different kinds of insects can be divided into groups called orders. There are many insect orders (about 29). The biggest insect orders are listed below: Beetles (order Coleoptera) have the front pair of wings changed into a hard shell to protect the back wings. Butterflies and moths (order Lepidoptera) have large, often colourful wings.

### Insect - Simple English Wikipedia, the free encyclopedia

A 2014 review by Rodolfo Dirzo and others in Science noted: "Of all insects with IUCN-documented population trends [203 insect species in five orders], 33% are declining, with strong variation among orders." In the UK, "30 to 60% of species per order have declining ranges". Insect pollinators, "needed for 75% of all the world's food crops", appear to be "strongly declining globally in both ...

### Decline in insect populations - Wikipedia

Simply The Most. The incredible number of insect species is only dwarfed by the incredible numbers that they sometimes occur in. In 1943, Prof. Salt found that an acre of British pastureland near Cambridge supported over 1,000,000,000 Arthropods. Of which, nearly 400,000,000 were Insects and 666,000,000 were Mites - the remaining 38,000,000 were Myriapods (Centipedes and Millipedes).
