In calculus, the second derivative, or the second order derivative, of a function f is the derivative of the derivative of f . Roughly speaking, the second derivative measures how the rate of change of a quantity is itself changing; for example, the second derivative of the position of an object with respect to time is the instantaneous acceleration of the object, or the rate at which the ...

Second derivative - Wikipedia

Differentiation is the action of computing a derivative. The derivative of a function $y = f(x)$ of a variable x is a measure of the rate at which the value y of the function changes with respect to the change of the variable x . It is called the derivative of f with respect to x . If x and y are real numbers, and if the graph of f is plotted against x , derivative is the slope of this graph at each ...
