TLS performs two main functions important to the users of the Internet today: One, it verifies who a party is, known as authentication. Two, it offers end-to-end encryption at the transport layer for upper level protocols that lack this native feature (ftp, http, email protocols, and more).. The first, verifies who a party is and is important to security as end-to-end encryption.

Origin. It was originally written over an omitted letter or several letters as a scribal abbreviation, or "mark of suspension" and "mark of contraction", shown as a straight line when used with capitals. Thus, the commonly used words Anno Domini were frequently abbreviated to A o Dñi, with an elevated terminal with a suspension mark placed over the "n". Such a mark could denote the omission ...
