looked at numerically summarizing data from one variable (univariate data), but newspaper articles and studies frequently describe the relationship between two variables (bivariate data). It's this second class that we'll be focusing on in Chapter 4. There are plenty of variables which seem to be related.

Going back to our 50 sampled pennies in Figure 8.2, the point estimate of interest is the sample mean \overline{x} of 1995.44. This quantity is an estimate of the population mean year of all US pennies μ . Recall that we also saw in Chapter 7 that such estimates are prone to sampling variation. For example, in this particular sample in Figure 8.2,
