A buyer's guide to mountain bike suspension.

Forks for general trail riding typically hit the 'sweet spot' of 120mm travel, while beefier All-Mountain forks come in around 140mm and are often available with 20mm or 15mm bolt-through axles for extra stiffness. Longer-travel forks are generally heavier as they need to be overbuilt to prevent flex.

Forks buying guide - Chain Reaction Cycles

There are 150mm, 160mm, 170mm, 180mm travel options for both 27.5" and 29" wheels and the Debonair air spring system is used in the forks. The Lyrik RC is the cheapest fork in the range, using a version of the Charger 2 damper that has external rebound and low-speed compression damping adjustment.

Your complete guide to the RockShox fork range | off-road.cc

Measure the distance the O-ring has been pushed up from the wiper seal in mm. Divide this number by the total travel (eg 160 mm) and then x 100 to get the percentage sag. To achieve the correct sag, add or remove air from the air-spring as needed and repeat.
