The current situation in ECE4760 PIC32 developers is that there is a lack of library for them to directly access the file stored in an SD card. To enhance the feasibility and capability of the use of PIC32, a SD card library is needed to be created. Therefore, the developers are able to read, write or update information in the system directly.

SD cards can be interfaced with microcontrollers using two different protocols: The SD card protocol and the SPI protocol. The SPI protocol is the most commonly used protocol at the moment. In this tutorial, we will use the SPI protocol. Figure 3 below shows a typical SD card interfaced with a PIC microcontroller in SPI mode.
