ST_Volume — Computes the volume of a 3D solid. If applied to surface (even closed) geometries will return 0. ST_MakeSolid — Cast the geometry into a solid. No check is performed. To obtain a valid solid, the input geometry must be a closed Polyhedral Surface or a closed TIN.

Chapter 5. PostGIS Reference

If the size and volume of your data increases over time, you may start seeing any number of performance and scalability problems on a single PostgreSQL node. For example: High CPU utilization and I/O wait times slow down your queries, SQL queries return out of memory errors, autovacuum cannot keep up and increases table bloat, etc.

Alternatively, manual port mapping can be specified with the --publish or -p options, just as when using docker run: docker-compose run --publish 8080:80 -p 2022:22 -p 127.0.0.1:2021:21 web python manage.py shell

docker-compose run | Docker Documentation

I personally find the long syntax that was added in version 3.2 more clear than the old short syntax.. In the example below we can see a named volume (mydata) being used by the web service with the long syntax. The db service also uses a named volume called dbdata (second path under db service volumes), but defines it using the old string format for mounting a named volume:
