Much has been written about physicist J. Robert Oppenheimer—the substance of his life, his intellect, his patrician manner, his leadership of the Los Alamos National Laboratory, his political affiliations and postwar military/security entanglements, and his early death from cancer, amount to a highly compelling story.

Metabolic models of life history commonly assume continuity in tissue-specific metabolism over the life course, with metabolic rates increasing in a stable, power-law manner (28, 29). Measures of humans here challenge this view, with deviations from the power-law relationships for total and basal expenditure in childhood and old age (Figs. 1 ...
