A common physics lab involves quickly climbing a flight of stairs and using mass, height and time information to determine a student's personal power. Despite the diagonal motion along the staircase, it is often assumed that the horizontal motion is constant and all the force from the steps is used to elevate the student upward at a constant speed.

In quantum mechanics, spacetime transformations act on quantum states. The parity transformation, \hat{P} , is a unitary operator, in general acting on a state as follows: $\hat{P}|\psi\rangle = |\psi\rangle$. One must then have $\hat{P}^2 = 1$, since an overall phase is unobservable. The operator \hat{P} , which reverses the parity of a state twice, leaves the spacetime invariant, and so is an internal symmetry which rotates its eigenstates by ...
