Two of the world's great agricultural challenges require bold new approaches and could share a solution. Nitrogen (N) pollution, affecting water, air, and the climate, presents one massive challenge. Ninety percent of increased reactive N originates as synthetic fertilizer applied to agricultural fields or N fixed in them (1). Because crops take up only 42 to 47% of the total applied N, more ...

water into groundwater and waterways. The formation and breakdown of NO_3^- - by bacteria and archaea also release nitrous oxide, a powerful greenhouse gas, as well as more NO_x , which contributes to air pollution problems. Once N nitrifies into NO_3^- , unless crops or grasses quickly take it up, it has a good chance of polluting the environment.

A more ammonium solution to mitigate nitrogen ...
