Sickle Cell Disease (Sickle Cell Anemia) - Causes & Types

What causes sickle cell disease? The cause of SCD is a defective gene, called a sickle cell gene. People with the disease are born with two sickle cell genes, one from each parent. If you are born with one sickle cell gene, it's called sickle cell trait. People with sickle cell trait are generally healthy, but they can pass the defective gene on to their children.

Sickle Cell Disease | Sickle Cell Anemia | MedlinePlus

In people with sickle cell anemia, hemoglobin - a substance in red blood cells - becomes defective and causes the red blood cells to change shape. The faulty hemoglobin is called hemoglobin S (HgbS), and it replaces normal hemoglobin which is called hemoglobin A (HgbA).

the beta chain of hemoglobin. This defect causes the hemoglobin protein to stick together and form stiff fibers. These fibers distort the shape of the red blood cells and make them more fragile.

Causes of Sickle Cell Disease - Sickle Cell Disease News

Sickle cell anemia. This inherited and sometimes serious condition is a hemolytic anemia. It's caused by a defective form of hemoglobin that forces red blood cells to assume an abnormal crescent (sickle) shape. These irregular blood cells die prematurely, resulting in a chronic shortage of red blood cells.

Anemia - Symptoms and causes - Mayo Clinic

Sickle cell anemia (sickle cell disease) is a blood disease that shortens life expectancy. It is caused by an inherited abnormal hemoglobin that decreases life expectancy. Symptoms of sickle cell anemia include bacterial infections, arthritis, leg ulcers, fatigue, and lung

and heart injury.

21 Sickle Cell Anemia Symptoms, Genetics, Treatment, Life ...

Sickle cell disease is a condition in which red blood cells are not shaped as they should be. Red blood cells usually look like round discs. But in sickle cell disease, they're shaped like crescent moons, or an old farm tool known as a sickle. These sickle shaped cells get stuck together easily, and block off small blood vessels.

Sickle Cell Disease (for Teens) - Nemours KidsHealth

Sickle cell disease can be diagnosed in an unborn baby by sampling some of the fluid surrounding the baby in the mother's womb (amniotic fluid). If you or your partner has sickle cell anemia or the sickle cell trait, ask your doctor about this screening. Treatment

Blood Transfusions and Sickle Cell Disease

Sickle cell disease (SCD) is a group of blood disorders typically inherited from a person's parents. The most common type is known as sickle cell anaemia (SCA). It results in an abnormality in the oxygen-carrying protein haemoglobin found in red blood cells. This leads to a rigid, sickle-like shape under certain circumstances.

Sickle Cell Crisis - What You Need to Know

The signs and symptoms of sickle cell disease are caused by the sickling of red blood cells. When red blood cells sickle, they break down prematurely, which can lead to anemia. Anemia can cause shortness of breath, fatigue, and delayed growth and development in children.

Sickle cell disease - Genetics Home Reference - NIH

This condition can lead to anemia. (Sickle cell anemia is different than other types of anemia, such as iron deficiency anemia.) Treatment for sickle cell disease has improved enormously in recent decades, so people with SCD are now living longer, healthier lives. Better treatment options have also made pregnancy safer for women with SCD.
